

Daisy V/L

The **Daisy V/L** was the first production rifle for caseless ammunition. It was released in 1968 by Daisy Outdoor Products.

In 1961, Cass Hough, the president of **Daisy Heddon division of Victor Comptometer**, purchased the design of a new firearm system. The new system was developed by a Belgian chemist named **Jules Van Langenhoven**. The new gun would be known as the **Daisy V/L rifle**.^[1]

The V/L ammunition consisted of a .22 caliber bullet with a small cylinder of propellant on the back, and no primer.^[2] The rifle resembled a typical spring-air rifle, but the 2000° hot, high-pressure air served not only to propel the projectile but also to ignite the propellant on the back of the V/L cartridge. The rifle uses a small, unique, and well designed part called an Obturator (obturator/ignitor) to compress the air as it is pushed through a tiny hole. This air is heated as it is pushed through the small hole enough to ignite the powder of the caseless round.^[3]

The V/L guns and ammunition were discontinued in 1969 after the US Bureau of Alcohol, Tobacco, Firearms and Explosives ruled that they constituted a firearm, and Daisy, which was not licensed to manufacture firearms, decided to discontinue manufacture rather than become a firearms manufacturer. About 23,000 of the rifles were made before production ceased.

The V/L has been added to the ATF Curio & Relic list.

Daisy V/L	
Type	Single-shot rifle
Place of origin	 <u>United States</u>
Production history	
Designer	Jules Van Langenhoven
Designed	1961
Manufacturer	<u>Daisy Outdoor Products</u>
Produced	1968–1969
No. built	23,000
Specifications	
<u>Cartridge</u>	.22 caliber, caseless round
<u>Cartridge weight</u>	29 grains (1.9 g) bullet
<u>Caliber</u>	.22 in (5.6 mm)
<u>Action</u>	Compressed air to ignite cartridge
<u>Muzzle velocity</u>	1,150 feet per second (350 m/s)
<u>Feed system</u>	Single shot
<u>Sights</u>	Front post, rear leaf sight
