

Fattah-2

Fattah-2 (Persian: فتاح-۲, lit. 'Conqueror-2') is an Iranian hypersonic missile project unveiled by the Islamic Revolutionary Guard Corps in November 2023 and still under development.^[2] It is introduced as a successor of Fattah-1, with a hypersonic glide vehicle (HGV) designed to reach high speed and maneuverability.^{[3][1]}

Capabilities

According to Iranian statements, Fattah-2 can travel at speeds up to Mach 15 and strike targets up to 1,400km away, though analysts have cast doubt on these claims, noting that "Fattah 1 hasn't proven itself to be operational or even work" and that "the missiles have not been proven and they are not likely ready for combat."^[4]

Though Iran claims Fattah-2 is designed to penetrate advanced missile defenses through unpredictable flight paths, Western analysts have expressed skepticism about its actual capabilities in deterrence calculations.^[5]

Fattah-2	
 Fattah-2 prototype unveiled at IRGC Aerospace Force exhibition, November 2023	
Type	Hypersonic missile
Service history	
Used by	 Iran
Production history	
Designer	 Islamic Revolutionary Guard Corps
Manufacturer	AIO
Specifications	
Warhead	Conventional Warhead
Propellant	Stage 1: Solid-Fuel Booster Stage 2: Liquid-Fuel HGV^[1]
Operational range	1,500 kilometres (930 mi) ^[1]
Launch platform	Road-mobile TEL
