

Blohm & Voss P 213

The **Blohm & Voss P 213** was a submission to the *Miniatürkäger* (Miniature Fighter) programme of the *Luftwaffe Emergency Fighter Program* towards the end of the *Second World War*. The *Miniatürkäger* was to be powered by a *pulse jet* but the programme was scrapped in December 1944.

History

In the latter part of 1944 the *Luftwaffe* High Command saw an urgent need to counter the devastating allied bombing raids. They conceived the idea of a *Miniatürkäger*, a miniature fighter, which could be cheaply and quickly manufactured in large numbers. Problems with the *turbojet* engines then appearing led to the adoption of the more primitive *pulse jet*. They approached *Heinkel*, *Junkers* and *Blohm & Voss* (B&V) in November to put forward designs using a strict minimum of materials, to be powered by one *Argus As 014* pulse jet engine, similar to that used in the *V-1 flying bomb*.^[1] There would be no radio and only the most basic electrical equipment.

Heinkel proposed a *He 162* air frame powered by a pulse jet and Junkers the *Ju EF 126*. The P 213 was B&V's proposal.

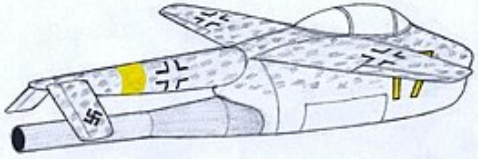

The *Miniatürkäger* programme was cancelled in December 1944 and none of the designs was built.

Design

The P 213 was a conventional high-wing monoplane with unswept, tapered wings and an inverted *v-tail*. The pilot was positioned just in front of the wing, the jet intake in the nose and the *Argus As 014* pulse jet beneath the aft fuselage.

However the structure was unconventional. Its fuselage skinning was to be two steel half-shells joined together, with the main structural loads and equipment carried by a fabricated steel core comprising the engine intake duct and main fuel tank. The wooden wing was a single fabrication screwed in place.^{[2][3]}

Armament was to be a single Mk 108 30 mm cannon installed above the jet intake.

P 213	
	
General information	
Type	"Miniature" Fighter
Manufacturer	Blohm & Voss
Primary user	<i>Luftwaffe</i>
Number built	None completed

Replica

A non-flying replica is on display at the Military Aviation Museum in Virginia Beach, Virginia, US.

Specifications

General characteristics

- **Crew:** one
- **Length:** 6.2 m (20 ft 4 in)
- **Wingspan:** 6 m (19 ft 8 in)
- **Height:** 2.28 m (7 ft 6 in)
- **Wing area:** 5 m² (54 sq ft)
- **Powerplant:** 1 × Argus As 014 Pulse jet, 2.7 kN (610 lbf) thrust

Performance Armament

- **Guns:** 1 X 30mm MK 108 cannon
