

RPG-26

The **RPG-26 *Aglen*** is a disposable anti-tank rocket-propelled grenade (RPG) launcher developed by the Soviet Union.

Design

The RPG-26 fires a one-stage rocket with jack-knife fins, which unfold after launch.

The rocket carries a 72.5-millimetre (2.85 in) diameter high-explosive anti-tank (HEAT) single shaped charge warhead able to penetrate 440 millimetres (17 in) of armour, 1 metre (3 ft 3 in) of reinforced concrete or 1.5 metres (4 ft 11 in) of brickwork.

The RPG-26 has a maximum effective range of around 250 metres (820 ft). Despite being similar in caliber to the RPG-22, the rocket features a slightly heavier and more powerful HEAT warhead, as well as a more powerful rocket engine.

Variants

RShG-2

The RShG-2 (Russian: Реактивная Штурмовая Граната, romanized: *Reaktivnaya Shturmovaya Granata*, lit. 'Rocket-propelled Assault Grenade') is a RPG-26 variant with thermobaric warhead.

It is also called the *Aglen-2* (Russian: Аглень-2).

The RShG-2 is heavier than the RPG-26 at 3.5 kilograms (7.7 lb) and has a reduced direct fire range of 115 metres (377 ft), intended for use

RPG-26	
 	
Type	Disposable <u>anti-tank</u> rocket launcher
Place of origin	<u>Soviet Union</u>
Service history	
In service	1985–present
Wars	<u>Syrian Civil War</u> <u>Russo-Ukrainian War</u>
Production history	
Designer	State Research and Production Enterprise, <u>Bazalt</u>
Designed	1980s
Manufacturer	State Research and Production Enterprise, <u>Bazalt</u>
Produced	1985–present
Variants	RShG-2
Specifications	
Mass	1.8 kilograms (4.0 lb) (projectile) 2.9 kilograms (6.4 lb) (loaded)
Length	77 centimetres (30 in)
Caliber	72.5 millimetres (2.85 in)
Action	440 mm: <u>RHA</u> 1000 mm: Reinforced

against infantry and structures rather than armoured vehicles.

The warhead contains 1.16 kilograms (2.6 lb) of thermobaric mixture, with an explosive yield roughly equal to that of 3 kilograms (6.6 lb) of trinitrotoluene (TNT).

The solid rocket booster of the warhead was taken from the RPG-26 and the fuse taken from the TBG-7 warhead used by the RPG-7. The warhead has a stated penetration ability of 300 millimetres (12 in) of concrete and 500 millimetres (20 in) of brickwork.

	concrete
	1500 mm: Brickwork
	2400 mm: Log and earth
<u>Muzzle velocity</u>	144 m/s (470 ft/s)
<u>Effective firing range</u>	250 m (270 yd)
<u>Sights</u>	<u>Iron sights</u>
