

TM-57 mine

The **TM-57** mine is a large, circular Soviet metal-cased blast anti-tank mine. It can either be triggered by a pressure or a tilt-rod fuze. A development of the TM-46 mine, it is found in Africa, the Middle East, and South East Asia.

Description

The TM-57 has a larger main charge and improved fuzing compared to the earlier TM-46. It is circular with a metal case and a central fuze well. A secondary pull-action fuze *MUV-2* (Rus. MYB-2) or *VPF* (Rus. ВПФ) pull and tilt fuze can be fitted on the side of the mine, which serves as an anti-handling device. The tilt rod fuze gives the mine improved resistance to blast; it is activated when it is forced to a deflection of 25 to 30 degrees. A training version of the mine that produces smoke is designated the TM-60.

A TM-57 with a tilt-rod fuze

Specifications

- **Diameter:** 316 mm
- **Height:** 102 mm
- **Operating pressure:** 120–400 kg or 21 kg tilt.
- **Weight:** 8.47 kg
- **Explosive content:** 6.34 kg of TNT, TGA (RDX/TNT/Aluminium) or MS (RDX/TNT/Aluminium/Wax)
- **Fuse:**
 - MVZ-57 pressure.
 - MVSh-57 tilt with MD019 detonator.
