

TM-72 mine

The **TM-72** is a Soviet cylindrical metal-cased anti-tank mine. It is normally used with the MVN-72 or MVN-80 magnetic influence fuzes, which give it a full width attack capability. It uses a 2.5 kg shaped charge warhead capable of penetrating approximately 100 millimeters of armor at a standoff distance of between 0.25 and 0.5 meters. It is compatible with the fuzes used with the TM-62 series of mines.

TM-72 mine

Type	Shaped charge anti-tank mine
Place of origin	Soviet Union
Service history	
Used by	<u>Russia</u> <u>Syria</u>
Wars	<u>Soviet-Afghan War</u> <u>Syrian Civil War</u>
Specifications	
Mass	6 kg
Height	80 mm
Diameter	250 mm
Filling	<u>TNT/RDX mix</u>
Filling weight	2.5 kg
Detonation mechanism	various typically MVN-72, MVN-80 magnetic influence fuzes
